 AB - J09104164 A tape comprises:
 - (i) a substrate;
 - (ii) an ink receiving layer contg. boehmite; and
 - (iii) a porous layer contg. thermoplastic polymer particles and oxide particles in that order on one side.
 - Also claimed is a label.
 - USE - Used for label writers whose use permits the easy prepn. of high-quality labels by an ink jet method and by heating.
 - ADVANTAGE - The obtd. label has high shelf stability of formed images. The porous layer has a film-forming temp. of 80-100 deg. C.
 - (Dwg.0/0)
